

QA Test Plan: GlobeWest AU Accessibility Remediation (Phase 1)

Document Control & Metadata

Field	Details
Project Name	GlobeWest AU Accessibility Remediation — Phase 1
Document Purpose	QA Test Strategy & Compliance Verification Framework
Target Audience	Director of Engineering / Company Directors
Prepared By	QA (4+ Years Experience)
Status	Final (Ready for Review)
Version	1.4
Date	June 16, 2026

1. Executive Summary

1.1 Purpose

This document details the Quality Assurance (QA) verification strategy for Phase 1 of the GlobeWest AU store accessibility remediation. The core goal of this phase is to ensure the Magento 2 store (`globewest.com.au`) meets **WCAG 2.2 Level AA** compliance.

1.2 Business Value

By running a rigorous and independent QA verification process on the staging environment (mcstaging2.globewest.com):

- **Zero-Regression Deployments:** We ensure that styling updates and visual tweaks do not break existing website functions.
- **Safe Codebase Forking:** We certify that the baseline codebase is fully compliant before it is copied (forked) for the US market launch in Phase 2.
- **Performance Safeguards:** We verify that accessibility updates do not degrade website speed, layout shifts, or responsiveness.

2. QA Scope & Testing Strategy

The QA team maintains complete independence to evaluate compliance. We use a combination of automated scanning tools and manual assistive technology checks.

Automated Scans (WCAG AA Rules)	Performance Audits (Core Web Vitals Check)	Screen Reader / Keyboard (NVDA & VoiceOver)
---	--	---

2.1 In-Scope Templates

QA will perform scans on all core store templates deployed on staging:

1. **Homepage**
2. **Product Listing Page (PLP)** (Categories & Search Results)
3. **Product Detail Page (PDP)**
4. **Cart & Checkout Flow**
5. **My Account / Customer Dashboards**
6. **Trade Portal**
7. **General Content & Informational Pages**

3. Test Verification Levels

The QA validation workflow consists of three primary verification levels:

3.1 Level 1: Automated Compliance Scans

- **Objective:** Immediate detection of standard accessibility failures.
- **Verification Points:**
 - **Color Contrast:** Verification of readable text ratios across header elements, footer links, promo banners, and ETA labels.
 - **Accessible Naming:** Verification that all image links and icon buttons (such as social media icons and compare triggers) have hidden text labels for screen readers.
 - **Viewport Constraints:** Verification that pinch-to-zoom is enabled for mobile visitors.

3.2 Level 2: Interactive State Checks

- **Objective:** Validate accessibility during user interaction.
- **Verification Points:**
 - **Focus Control:** Ensuring keyboard focus remains inside open drawers, popup search forms, and mini-cart modals until closed.
 - **Keyboard Navigation Flow:** Ensuring users can navigate all interactive menus, filters, and checkout fields using only the keyboard.
 - **Dynamic Alerting:** Confirming that form validation errors (like invalid email or empty checkout inputs) are announced correctly by assistive tools.

3.3 Level 3: Performance & Core Web Vitals Audits

- **Objective:** Confirm that front-end updates do not slow down the site.
 - **Pass Thresholds:**
 - **Lighthouse Accessibility Score:** 100/100 (automated checks).
 - **Largest Contentful Paint (LCP):** Under 2.5 seconds.
 - **Cumulative Layout Shift (CLS):** Under 0.1.
 - **Interaction to Next Paint (INP):** Under 200 milliseconds.
-

4. Deployed Functional Validation & Regression Scope

To ensure accessibility fixes do not damage existing core B2B/B2C store features, the QA team will execute functional regression test runs on the following areas:

4.1 Homepage

- Verify layout rendering, banner navigation, and responsiveness.
- Verify global search query entry and primary navigation dropdown menus.

4.2 Product Listing Page (PLP)

- Verify product grid loading, category listing layout, and pagination controls.
- Validate filter checkboxes, sorting options, and Compare item additions.

4.3 Product Detail Page (PDP)

- Verify product swatch selection, image galleries, and add-to-cart triggers.
- Validate wishlist additions, product specifications, and estimated delivery dates (ETA).

4.4 Checkout & Cart

- Verify Cart item updates, coupon applications, and B2B pricing calculations.
- Validate multi-step checkout entries, shipping/billing fields, and payment gateways.

4.5 Portals & Integrations

Verify that third-party integrations continue to function correctly:

- **ERP/Integrations:** NetSuite (via Celigo data sync checks).
 - **Search & Merchandising:** SearchSpring query results and filters.
 - **Customer Support & Marketing:** Zendesk chat embeds, Timify showroom bookings, and DotDigital tracking.
 - **Reviews & Loyalty:** Yotpo reviews display.
-

5. QA Lifecycle & Defect Triage Process

A structured process ensures alignment between QA scans, defect logging, developer resolution, and manual verification before release:

5.1 Severity Matrix

- **P1 - Critical:** Prevents standard user actions (e.g., unable to checkout using keyboard navigation, focus trap in search drawer).
- **P2 - Major:** Does not block critical actions but violates WCAG 2.2 AA standards (e.g., text color failing contrast check, missing descriptions on social media icons).
- **P3 - Minor:** Minor styling glitches under extreme browser zoom.

5.2 Defect Closure Loop

1. QA reports the issue with screenshot evidence, page URL, and the specific WCAG rule failed.
 2. Once developers deploy the fix to staging, QA performs a dedicated re-run to confirm compliance before closing the ticket.
-

6. Targeted QA Checklist (May 2026 Baseline Failures)

We have mapped the known issues from the baseline audit into specific QA test targets:

6.1 Names and Labels (WCAG SC 4.1.2)

QA automation scripts will select the following elements and assert that their accessible name is not empty or generic:

- `a.facebook`, `a.pinterest`, `a.instagram`, `a.tiktok`
- `button.action.tocompare` (Compare trigger)
- `button.action.towishlist` (Wishlist trigger)

6.2 Touch Targets (WCAG SC 2.5.5 / 2.5.8)

QA will programmatically assert that the tap targets for interactive components have a size and spacing conforming to the standard:

- **Target Elements:** `button.action.tocompare`, `a.product-item-photo.has-hover-image`, header/footer utility menus.

- **Validation Check:** Dimensions must meet target size criteria (minimum 44x44px, or $\geq 24 \times 24$ px with sufficient spacing).

6.3 Color Contrast (WCAG SC 1.4.3)

QA scripts will calculate and assert color contrast ratios on:

- `header.page-header` and `footer.page-footer` a elements.
- `div.promotional-banner-after-header` text elements.
- `span#eta-data.data` (Estimated arrival details).
- `div.home-page-fresh-ideas` component text blocks.

6.4 List Structure (WCAG SC 1.3.1)

QA will run structural DOM validations to ensure:

- `ol.product-items.widget-product-carousel` contains **only** `<li>` tag children.
- All `li.product-item` and `li.js-recent-posts-item` nodes are nested directly within parent `<ul>`, `<ol>`, or `<menu>` wrappers.

7. Recommended QA Automation Toolset

Testing Area	Tool / Framework	Purpose
UI & Flow Automation	Playwright	Driving test flows, page transitions, and keyboard event simulations.
Accessibility Scans	Axe-Core (Playwright Integration)	Automated rule checking for contrast, labels, semantic structures.
Performance Audits	Lighthouse CI	Automated checking of Core Web Vitals and Lighthouse scores.
Reporting Framework	Allure Report	Generation of clear, visual execution reports for management.
Assisted Testing	NVDA & VoiceOver	Manual verification of screen reader readability and landmarks.

8. Device & Browser Compatibility Matrix

QA will run compatibility verifications across the following target hardware and browser systems:

Device	Operating System	Target Browser
Windows PC	Windows 11	Chrome (Latest), Edge (Latest)
MacBook Pro / iMac	macOS Ventura & Sonoma	Chrome (Latest), Safari (Latest)
iPhone 13 mini	iOS 18	Safari (Latest)
iPhone 14 Pro Max	iOS 18	Safari (Latest)
iPad Air (5th gen)	iPadOS 17	Safari (Latest)
Samsung Galaxy S22	Android 14	Chrome (Latest)
Samsung Galaxy S23 Ultra	Android 14	Samsung Internet (Latest)
Samsung Galaxy Tab S8	Android 13	Chrome (Latest)

9. Entry, Exit, and Deliverable Criteria

9.1 Entry Criteria (QA Phase Start)

- Remediated codebase deployed to Staging (mcstaging2.globewest.com).
- Stable build with active integrations (SearchSpring, NetSuite) active on Staging.

9.2 Exit Criteria (Production Readiness)

- **Zero Open P1 or P2 Bugs:** All critical and major accessibility defects are closed.

- **Lighthouse Clean Pass:** Baseline page templates achieve a 100/100 accessibility rating on automated scans.
- **Core Web Vitals Baseline Maintained:** Performance metrics remain within approved limits.

9.3 QA Deliverables & Documentation

The following artifacts will be submitted at the end of the validation cycle:

- **Axe Accessibility Reports** (Automated scan logs)
- **Lighthouse Performance Summaries**
- **Cross-Browser Execution Reports** (Allure Report outputs)
- **Remediation and UAT Bug Log** (Details of defect tracking)
- **Final QA Sign-off & Verification Report**
